COLORS & LACQUERS TANK FARMS & SILOS

Weighing, mixing and metering systems
for the production and storage of colors and lacquers

IFA provides an individual concept for your specific needs:

- Tank farms with pumps, valves and pipings
- Silo plants, bag-pouring stations, Big-Bag emptying stations with conveying and metering systems
- Production systems such as a mixing, homogenizing, dispersing and grinding
- Dosing technology
- Toning technology
- Filling technology
- Coating kitchen
- Control systems with production data collection and remote maintenance

Processing units for

- Emulsion paints
- Lacquers
- UV-lacquers

Raw material storage and administration of tank farms and silos

Planning, design, construction, assembly and start-up of:

- Truck-and-trailer unloading stations
- Tank farms for raw materials such as phenol formaldehyde resins, lignin, silanes, silicone as well as coloring pigments
- Complete control systems of tank farms including the logging of consumption
- Unloading station for silo trucks
- Conveying and storage of solid raw materials e.g. urea, ammonium sulfate etc.
- Dilution station for urea granulates into water, as well as storing of the urea solution
- Silo construction including filling and unloading systems
- Big-Bag emptying stations
