## SMART IFA = SMART PRODUCTS

### INTERNET OF THINGS, SERVICES & PEOPLE (IOTSP)

We offer you pioneering technical solutions and modern systems for your SMART production: precise, adaptable and above all safe.

### SMART NETWORKS

System operation with smartphone or tablet PC and simultaneously flexibly managing and analysing production data in real time. All this is possible by networking your system: via Intranet or Internet, with in-house back-up or on the cloud. We have the right solution for you.

### INNOVATION AND TECHNOLOGY „MADE IN GERMANY“ FOR YOUR SYSTEM CONTROL

Customised programming solutions allow for future-oriented action, for example through the possibility of a quick product change or the avoidance of additional waste and cleaning costs.

Which special requirements do you define for your production process?

### WITH IFA YOU ARE UP TO DATE

We combine your value chain with the life cycle of your products. We manage your big data with a variety of sensors and analysis options. These data volumes are collected and transferred to your in-house database or cloud systems. In addition, we offer you the integration of all required interfaces, such as to MES or ERP systems.
